Zuhayr Ahmad Khan

200 NW 2nd St, Waukee, IA 50263 | (+1) 872-357-4596 | zuhayrkhan3199@gmail.com | LinkedIn | GitHub

SKILLS

- **Programming Languages:** Java, C#, Python, JavaScript, C++, SQL, Bash
- **Software Engineering:** Object-Oriented Programming, Data Structures & Algorithms, Multithreading, Design Principles, Debugging, Code Reviews, Software Testing
- **Backend Development:** REST APIs, Microservices, Backend Services, Application Integration, Service-Oriented Architecture
- **Frontend Development:** JavaScript, Angular, HTML5, CSS3, AJAX, Responsive Web Development
- **AI & Machine Learning:** TensorFlow, Deep Learning, RNN, CNN, AI-Assisted Development, GitHub Copilot, AI Code Evaluation
- **Databases:** PostgreSQL, MySQL, SQL, Relational Database Design, Database Connectivity
- **Cloud & Distributed Systems:** AWS, Microsoft Azure, Cloud Infrastructure, Distributed Application Environments
- **Development & Delivery Tools:** Git, GitHub, Jenkins, GitHub Actions, Harness, CI/CD, Automated Build and Deployment Workflows
- **Containers & Infrastructure:** Docker, Kubernetes, Rancher, Terraform, Ansible, Linux
- **Monitoring & Observability:** Splunk, CloudWatch, Grafana, LogicMonitor, Application Monitoring, Log Analysis, Root Cause Analysis
- **Engineering Practices:** Agile/Scrum, SDLC, Unit and Integration Testing Concepts, Technical Documentation, Troubleshooting, Cross-Functional Collaboration, Technical Mentoring

PROFESSIONAL EXPERIENCE

Options Clearing Corporation – Chicago, IL
DevOps / Platform Engineer | Aug 2024 – Sept 2026

- Collaborated with application developers and infrastructure engineers to support enterprise software applications, resolve complex technical issues, and improve application reliability across production environments.
- Supported Java enterprise application environments by investigating application errors, analyzing runtime logs and exceptions, and coordinating with development teams to troubleshoot application and service connectivity issues.
- Developed Python and Bash automation scripts for infrastructure health checks, log analysis, certificate validation, backup verification, and proactive identification of operational problems.
- Maintained and enhanced CI/CD workflows using Jenkins, GitHub Actions, and Harness, improving application build, deployment, and release consistency across development and production environments.
- Automated infrastructure provisioning and configuration management using Terraform and Ansible, improving repeatability and reducing manual operational tasks.
- Supported containerized applications and Kubernetes environments using Docker and Rancher, troubleshooting deployment failures, application health issues, resource constraints, and Linux-related problems.
- Investigated complex application and infrastructure issues using Splunk, CloudWatch, Grafana, and LogicMonitor, performing root cause analysis and implementing corrective actions to improve system reliability.
- Improved monitoring and alerting practices by refining thresholds and prioritizing actionable signals, contributing to a 10% reduction in low-value alerts.
- Used GitHub Copilot and AI assisted development workflows to accelerate scripting, code exploration, log analysis, and troubleshooting while reviewing and validating generated solutions.
- Collaborated with engineering stakeholders to document technical solutions, improve operational processes, and establish repeatable approaches to application deployment and troubleshooting.

FDM Group – Chicago, IL
Cloud / Site Reliability Engineer | Feb 2023 – Aug 2024

- Supported enterprise application environments across AWS, Azure, and Linux platforms, troubleshooting application availability, configuration, connectivity, and performance issues.
- Supported Java-based applications by reviewing application logs, investigating runtime errors, troubleshooting backend connectivity, and coordinating defect resolution with development teams.
- Assisted development teams with application deployments and release activities through Jenkins and GitHub CI/CD workflows.
- Developed Python and Bash scripts to automate system health checks, log rotation, disk-space cleanup, patch validation, and application connectivity verification.
- Supported Docker and Kubernetes workloads, investigating container startup failures, deployment inconsistencies, and application runtime issues.

- Monitored application and infrastructure performance using Splunk, CloudWatch, and Grafana, analyzing logs and metrics to identify technical problems and support incident resolution.
- Troubleshot PostgreSQL and MySQL connectivity and performance issues, collaborating with application and infrastructure teams to resolve database-related disruptions.
- Assisted with infrastructure provisioning and configuration management using Terraform and Ansible to improve environment consistency and operational efficiency.
- Participated in incident investigation, technical documentation, and continuous improvement initiatives to strengthen application support and production reliability.

First Central Group – Manchester, UK
Software Engineer | Dec 2020 – Mar 2021

- Developed and maintained backend enterprise applications using Java and OOP principles, following established software engineering standards and Agile development methodologies.
- Implemented application functionality and reusable software components to support business requirements and improve application maintainability.
- Worked with backend application logic, data structures, algorithms, and relational database concepts to support application functionality and data processing.
- Investigated software defects, debugged Java application behavior, and collaborated with QA engineers to validate fixes and improve application reliability.
- Supported REST application integrations, Git version control, code reviews, application testing, and software release activities throughout the software development lifecycle.
- Collaborated with cross-functional development teams to document technical issues, resolve defects, and improve software quality and maintainability.

EDUCATION

BSc (Hons) Computer Science — University of Salford, Manchester, UK
Specializations: Data Structures & Algorithms (Java), Software Engineering, Unity Development, Agile/Scrum, Deep Learning with Python

CERTIFICATION

AWS Cloud Practitioner
